UNIVERGE® Business ConneCT

Truly unifying communications

Communications is essential to all organizations and business processes and today a variety of methods – phone, conferencing, email, voicemail, and IM – is available to support this. However, managing the various communication streams efficiently, can be challenging.

UNIVERGE® Business ConneCT, NEC's versatile all-in-one Unified Communications & Collaboration suite, integrates all communication streams and presents them in a single view, giving employees control over how and when to be contacted, via a choice of devices – in the office, at home and when they are on the move.

Business ConneCT includes call control, presence, voicemail, operator and directory services, as well as a comprehensive contact center.

Versatile user modes

Simple and cost-effective to deploy, the three user modes – Employee, Operator and Contact Center Agent – use the same database, a common user interface, and are managed from a central point. These versatile user modes allow employees to easily switch between various roles. For instance in peak hours some of your staff, including remote office workers, can act as Operator or Agent.

Business ConneCT is a proven solution that is ideally suited to meet the dynamic communication needs of any organization, small or large. It enables your organization and employees to communicate more efficiently and effectively - and become more productive and competitive!

Business made Easy!

While the benefits of Unified Communications & Collaboration (UC&C) are clear, organizations often regard its implementation as complex and tedious. Business ConneCT has been designed to easily install, use and manage, providing effortless UC&C.

Deployed by many organizations around the world, Business ConneCT supports many languages to suit each individual user. The scalable, flexible and robust solution runs on a single or shared server. Its intuitive design and interface make it easy to use, with minimal training. Additional features or more users can be enabled by simply activating more licenses - all software based.

Enhanced contactability and call handling

Simplified call handling (one click to call and collaborate) and a single point of contact connects callers to the right person, first time right. This reduces waiting times and lost calls.

Showing one consistent, professional face to the customer, it enables your organization to provide personalized, accurate and qualified responses. Pop-up on incoming calls integrated with back office applications enables professional and well-informed call handling.

More collaboration, less costs

Displaying real-time Presence status of employees and offering flexible roles it facilitates office, mobile and home workers to collaborate effectively. Enhanced means of collaboration reduce latency, calling costs and travel costs, while flexible working modes and roles reduce staff costs. Multi-party videoconferences are set up with a single click - on any computer, smartphone or tablet, whatever you or your contacts feel most at ease with.

- One Solution for Employees, Operators and Contact Center.
- Improves efficiency, flexibility and productivity of your workforce.
- Single point of contact for your customers, 24/7.
- Reduces waiting times and lost calls.
- Affordable Unified Communications.
- Facilitates mobile and home workers.

One Click to Collaborate

Business ConneCT Employee

Employee 

Improved efficiency and productivity

Business ConneCT Employee provides vital information to all employees, such as the name, number and photo of the caller. Any incoming call is instantaneously displayed in a pop-up window, enabling employees to handle the call efficiently from their screen. Standard features, such as hold, transfer and end call are just a mouse click away.

A call log provides information on all calls, the last number dialed as well as Voicemail messages. Calling back is a matter of clicking on an entry in the contact list. And by redirecting calls to a mobile phone, employees can be available for customers 24/7.

Presence

Presence information allows users to check whether colleagues are present or busy, and when they will be available again. A single view shows the availability of everyone in your organization in real time and you can contact colleagues the minute they become available.

Voicemail & Messaging

Business ConneCT has built-in Voicemail. Activation can either be controlled through the Business ConneCT calendar or through the Microsoft Outlook calendar. Instant Messaging (and DECT and SMS Text messaging) provides an alternative way of contacting a colleague while he or she is busy on the phone or in a meeting. It can also be used by an Operator as soft break-in, while for remote workers it saves communication costs.

Mobile Client

Business ConneCT's Mobile Client works with the majority of mobile phones, making them true extensions of the enterprise telephony infrastructure and giving mobile workers the same familiar experience on their mobile phone as they're used to on their office PC.

Some of the powerful features Mobile Client offers on your mobile phone:

- Allows you to have one telephone number on your business card.
- Access to the Corporate, External and Personal Directory.
- Presence status of you and your colleagues.
- Click-to-Dial from the Directory.
- Call setup is done through the PBX, saving costs.
- Control your Call Redirections and Voicemail.
- The Operator knows if you are busy on your Mobile Phone.
- Built-in security will keep your information safe and secure.

Directory Services

Business ConneCT provides access to up-to-date and powerful directories that also show phone and presence status. Employees can create their own personal list of contacts, while external and web-based directories can also be integrated. The Hotkey Dialer can dial any phone number in any application on the screen.

The directory can be accessed from desktop screens and phones, as well as from DECT handsets and mobile phones. The directory can be linked to other directories, creating a single point of entry and management of user data.

Business ConneCT UCC Employee

UCC Employee

Unique multiparty video conferencing across desktops, notebooks, smartphones and tablets

With organizations becoming increasingly fragmented, departments more flexible and employees more mobile, collaboration is becoming crucial as a means of enabling them to work together, in real time, and interact with each other, with clients and suppliers – wherever they are.

The use of virtual meeting spaces for project teams for instance enables real-time collaboration on documents, designs and ideas. Business ConneCT enables you to work with partners, suppliers and customers to shorten decision cycles, improve information sharing and increase the speed of business.

BYOD and Collaborate

With the Business ConneCT UCC Employee client, employees can easily set up and experience audio and video conferencing from wherever they are. They can effortlessly connect via PCs, iMacs, iPads, iPhones, Android Phones and Tablets and utilize screen sharing, file sharing, co-browsing and more, in a rich and engaging user experience. This flexibility enables organizations to expedite consumerization and implement BYOD (Bring Your Own Device) policies. Finding and installing a UCC client has never been easier. The BCT UCC Employee client runs in a Web browser on iMac, Windows and Linux PC, so no installation is required. You can find and download the BCT app for smartphones and tablets from the app store.

External 'guest users' - an exclusive advantage

With Business ConneCT you can even provide services such as audio-, video-, and web-conferencing to your customers or other contacts off-site. You can include external guest users in a three-way conference at the touch of a button, while they too are able to use their own preferred smartphone or tablet.

Now there is a UC solution that not only accelerates collaboration between colleagues but also between customers and suppliers!

Business ConneCT Operator

Better service and satisfied customers

Business ConneCT's combination of intuitive icons, name directory and messaging facilities, offers professional operator functionality to any user. Queues show at a glance where a call is coming from: external, internal or rerouted. Calls are always routed right because operators can see which person the caller wants to reach and which colleagues with similar skills are available. Additionally, the comprehensive view on the queues allows operators to spot specific callers easily and treat them in a special way (VIPs, returning callers, etc.). Not only does Business ConneCT offer a fully-featured and advanced operator position, with Business ConneCT any authorised employee can act as operator - connecting callers, handling messages and locating staff. The single user interface makes it easy to combine operator tasks with other work.

Not just an Operator

A specific application is within the hospitality industry, where Business ConneCT integrates with Tiger® and FCS® middleware to connect to a hotel's Property Management System. This integration provides real-time information about check-in / check-out status of a guest and extensive guest information like language and VIP status. Business ConneCT Operator is also available for visually impaired people, allowing them to work with braille displays, voice guidance and screen magnification software. And because it's an all-in-one solution, it makes all of the benefits of Unified Communications also available to operators.

Cost reduction by a more efficient use of staff

Because any employee can act as operator and can assist during peak hours this reduces the need for additional dedicated operator staff.

Improved service levels and satisfied customers

VIP caller priority, reduced waiting time and the personal, well-informed service ensures an optimal and friendly customer response. The Presence status information of the destination ensures calls are routed first time right.

Enhanced productivity

Fast call handling thanks to the integrated directory and intuitive user interface lead to reduced waiting times and consequently more customers serviced.

Minimal training required

Because all roles – Employee, Operator and Agent – have one look and feel, switching roles is easy. The intuitive user interface ensures a short learning curve, enabling use with minimal training.

Business ConneCT Contact Center

Enhance Customer Contact

Business ConneCT Contact Center equips your organization with a single point of contact and guides callers and emails to the best suited employee, reducing waiting time and improving staff motivation.

Skill-based routing ensures calls are transferred to those agents with the best matched skill set. Agents are provided with additional information, such as the language in which to greet a caller or any other customer information. Each customer call or email reaches the right person, first time, every time!

Unique Flexibility

Agents, supervisors and features can be added simply by adding licenses. Call or email routing can be easily configured based on clock and calendar, on customer specific items such as language, requested topic, historical data, identification, on staff specific skills and availability. Queue announcements give options for Callback or to leave Voicemail.

And what's more, every employee, wherever located, can act as agent while doing other tasks. The common user interface makes switching from Employee to Contact Center Agent mode easy, while all agents have access to advanced UC functions like Presence Management, Instant Messaging, DECT and Mobile Messaging.

Monitor and improve your business process

Business ConneCT's Contact Center features help your company to manage your Contact Center's staffing and service levels. Group performance statistics enable your company to improve customer service, while extensive reporting tools provide insight into performance, costs and trends.

- Get the most out of your agents by integrating their skill set in the different call flows.
- Track agent productivity, customer behaviour and service trends.
- Add agents when you need them the most and improve your performance.
- Manage the routing of incoming calls (and emails) in a flexible, easy way.
- A dashboard shows calls, performance, queue length, agent and group status.
- Extensive reporting gives the tools to optimize inbound and outbound service levels.

Functional Details
